

Build a team, not a chatbot

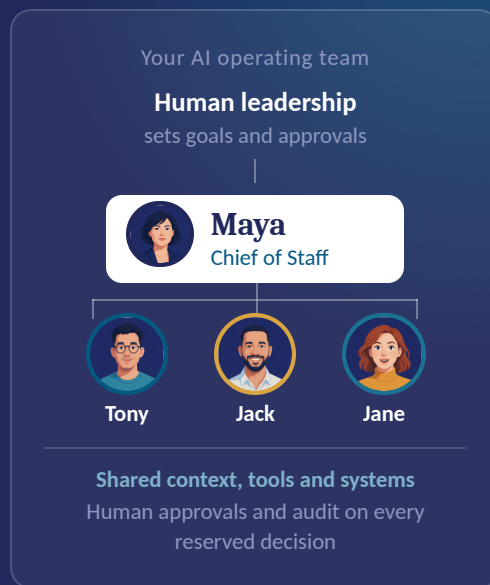

Meet your AI team.

Specialized agents. One shared mission.

Give each AI agent a real job, the tools for that job, and clear authority. They work together across your systems while your team keeps control of the decisions that matter.

See the team in action

Bring one workflow. We'll demo how a team of agents would run it.

One team. Four roles. One governed system.

The roles are examples. Your AI team is designed around the work your business needs done.

AI Chief of Staff

Maya

Plans and coordinates. Turns goals into work, delegates to specialists, watches progress, resolves blockers and escalates decisions.

AI Product Engineer

Tony

Builds and validates. Works in code, tests, GitHub and staging. Prepares changes and stops at the production approval gate.

AI Sales Agent

Jack

Builds pipeline. Researches accounts, qualifies prospects, prepares outreach, follows up and feeds objections back to the team.

AI Marketing Agent

Jane

Creates demand. Monitors the market, plans campaigns, drafts content, analyzes performance and tests new messaging.

How the team works together

Jane

spots interest

Jack

captures objections

Tony

addresses technical gaps

Maya

coordinates and escalates

Built like a team. Governed like an enterprise system.

Identity

Every agent has a role

Permissions

Only the tools it needs

Approvals

Humans keep reserved decisions

Audit

Actions stay reviewable
